

## **Exercise Science- Pediatrics**

# **Why Pediatrics?**

Pediatrics is primarily concerned with the physical, emotional, and social health of children from birth to young adulthood. Concerned with more than just the physical well-being, those working in pediatrics are involved with the prevention, early detection, and management of behavioral, developmental, and functional social problems that affect their patients. Pediatric healthcare careers are available at all professional levels and in nearly every physical, behavioral, and mental health discipline. Many of these careers allow you to work with children in multiple age ranges.
